Vintage Wooden Mechanics Creeper Seat Wood Stool with Metal Wheels Rolling Seat
Industrial Stool Automotive Garage

Materials: Wood, Metal

Overall height: 13 1/2 inches

Overall width: 9 inches

Overall depth: 17 7/8 inches

Seat width: 16 inches

Here is a vintage mechanics roller seat made entirely out of wood with the exception of the amazing metal casters/wheels. It was used to move around an area while the mechanic, or worker, fixed an automobile or something else. This particular seat has two areas underneath. The back area is an open space with a lip and the front area is a little deeper and has quite a few holes to hold tools. The bottom has four metal wheels with each attached with four screws. All four wheels are firmly attached. While they do move/swivel they are not nice and smooth like modern day wheels so bear that in mind. Lastly, there is a cool hidden feature to this cart under the seat. One of the pictures does show this...it is an old advertisement from the side of a produce box for California celery. The font is red and we thought this was a cool feature. Built well, worn and old, and it weighs in at 15 pounds...a solid piece!

Measurements: 17 7/8 inches deep, 13 1/2 inches tall, and 9 inches wide. The seating area is 16 inches

The holes are 5/8 of an inch round/wide. The back area where things can go is 12 inches wide by 12 inches deep.

There is a pack of 3 x 5-inch cards in one or more picture for size comparison.
